Worksheet 13 - Molecular Shapes The shapes of molecules can be predicted from their Lewis structures by using the VSEPR (Valence Shell Electron Pair Repulsion) model, which states that electron pairs around a central atoms will assume a geometry that keeps them as far apart from each other as possible. This is illustrated by the drawings below.

Chapter 12 Review 1: Covalent Bonds and Molecular Structure

Molecular Geometry How can molecular shapes be predicted using the VSEPR theory? Why? When you draw a Lewis structure for a molecule on paper, you are making a two-dimensional representation of the atoms. In reality however, molecules are not flat—they are three-dimensional. The true shape of a molecule is important because it determines many physical and chemical properties for the substance.
